**Figures**

**Figure 1.** Diagram of right below knee amputation showing a) the underlying bones requiring coverage and b) the muscles used for coverage (mg: medial gastrocnemius; lg: lateral gastrocnemius; s: soleus).

**Figure 2.** The right below knee amputation, prior to allografting. Note a) the trans-tibial metalwork to facilitate elevation of the limbs during surgery and b) transverse scoring of the medial gastrocnemius muscle to obtain greater coverage.
Figure 3. The stumps covered by allograft, prior to autografting.

Figure 4. Day 10 postoperative result; no dressing was required at this stage.
